

Git: Status → add → Commit → Push

1 Questions

1. In order to upload my code on certain repository, do I need to have a complete local copy of it in my computer? [Yes, it is necessary to clone the repository locally to make own updates on it.](#)
2. If I created a branch where I added new files, after merging they will appear on master? [Yes, they appear but should be careful. git add files/ git commit -m "Description"/ git checkout master/ git merge BranchName/ git push](#)
3. There is a master for every repository? [No, once a repository is downloaded, folders can be created. To upload the online repository is necessary to add, commit and push.](#)
4. How to kill a branch? [Locally they are killed by: git branch -d Name.](#)
